# 1 Release Notes Update History

Version	Date	Description
22.49.1014	June 2026	Initial release of this Release Notes version.

---

## 2 Overview

Firmware which is added at the time of manufacturing, is used to run user programs on the device and can be thought of as the software that allows hardware to run. Embedded firmware is used to control the functions of various hardware devices and systems, much like a computer's operating system (OS) controls the function of software applications. Firmware may be written into read-only memory (ROM), erasable programmable read-only memory (EPROM) or flash memory.

### 2.1 Firmware Download

Please visit the [firmware webpage](#).

### 2.2 Document Revision History

A list of the changes made to this document are provided in [Document Revision History](#).

## 3 Firmware Compatible Products

The chapter contains the following sections:

These are the release notes for the NVIDIA® ConnectX®-6 Dx adapters firmware. This firmware supports the following protocols:

- Ethernet - 1GbE, 10GbE, 25GbE, 40GbE, 50GbE<sup>1</sup>, 100GbE<sup>1</sup>, 200GbE<sup>2</sup>
- PCI Express 4.0, supporting backwards compatibility for v3.0, v2.0 and v1.1

1. Speed that supports both NRZ and PAM4 modes in Force mode and Auto-Negotiation mode.
2. Speed that supports PAM4 mode only.

When connecting an NVIDIA-to-NVIDIA adapter card in ETH PAM4 speeds, Auto-Neg should always be enabled.

Please make sure to use a PCIe slot that can supply the required power to the ConnectX-6 Dx adapter card as stated in section Specifications in the adapter card's User Manual.

### 4.1 Important Notes

SR-IOV - Virtual Functions (VF) per Port - The maximum Virtual Functions (VF) per port is 127. For further information, see [Known Issues](#).

It is recommended to enable the "above 4G decoding" BIOS setting for features that require a large amount of PCIe resources (e.g., SR-IOV with numerous VFs, PCIe Emulated Switch, Large BAR Requests).

Planned for Version	Description
xx.47.1026	<p>To align with updated Microsoft UEFI Secure Boot requirements and the upcoming end-of-life of the 2011 Certificate Authority (CA), NVIDIA is transitioning to the 2023 CA. To ensure successful loading of the Expansion ROM (ExpROM) during the UEFI Secure Boot process, system BIOS and operating system trust stores must be updated to include the 2023 CA.</p> <p><b>Note:</b> When performing a firmware update of ConnectX and BlueField devices the new certificate is required for Secure Boot. To continue supporting Secure Boot, systems must be updated to recognize the "Microsoft Option ROM UEFI CA 2023."</p>

### Known Issues

Internal Ref.	Issue
4721 472	<p><b>Description:</b> When VXLAN or other encapsulation is used, the additional header is inserted after the SxD unit, and this header is not included in the rate calculations. VQoS distributes tokens based on the SxD output. Therefore, when VQoS allocates 130 Gbps (the configured rate limit), SxD transmits 130 Gbps, but downstream units (SXW/SXCC/SXE) add the encapsulation header. As a result, the actual line rate observed on the wire (e.g., via mlnxperf) may exceed the configured rate limit.</p> <p><b>Workaround:</b> N/A</p> <p><b>Keywords:</b> VxLAN, VQoS</p> <p><b>Detected in version:</b> 22.47.1088</p>
4394 475	<p><b>Description:</b> The existing congestion control configuration applies globally, rather than on a per-priority basis.</p> <p><b>Workaround:</b> Ensure that the configuration values for all priorities are aligned in either <code>mlxconfig ROCE_CC_PRIO_MASK_P\$port</code> or <code>sysfs ecn/roce_rp/enable/\$port</code>.</p> <p><b>Keywords:</b> Congestion control, ROCE_CC_PRIO</p> <p><b>Detected in version:</b> 22.45.1020</p>

3547022	<p><b>Description:</b> When <code>tx_port_ts</code> is set to "true", due to a compensation mechanism in the Tx timestamp available in some hardware Rx timestamp errors, a symmetrical error and no clock offset occur when using the timestamps to synchronize the device clock. This might also cause an error while using timestamps for delay measurements (e.g., delay measurements reported by a PTP daemon) and even negative delay measurements in some cases.</p> <p><b>Workaround:</b> N/A</p> <p><b>Keywords:</b> PTP path delay</p> <p><b>Discovered in Version:</b> 22.38.1002</p>

2878841	<p><b>Description:</b> Firmware rollback fails for the signature retransmit flow if the QPN field is configured in the mkey (as it only allows the given QP to use this Mkey) as the firmware rollback flow relies on an internal QP that uses the mkey.</p> <p><b>Workaround:</b> N/A</p> <p><b>Keywords:</b> Signature retransmit flow</p> <p><b>Discovered in Version:</b> 22.37.1014</p>

# 10 Release Notes History

## 10.1 Changes and New Feature History

 This section includes history of 3 major releases back. For [older releases history](#), please refer to the relevant firmware versions.

Feature/Change	Description
<b>22.48.1000</b>	
<b>PLDM PDR Repository Change Event Support</b>	PLDM now supports the PDR Repository Change event type, enabling notification to the BMC when PDRs change. With this flow, the BMC can detect cable insertion/removal events. Refer to DSP0248 for details.
<b>NVGRE VSID Modify-Header Support</b>	Extended packet modify-header operations to support <code>set</code> and <code>copy</code> actions on the NVGRE VSID (Virtual Subnet Identifier). A new field, <code>TUNNEL_HDR_DW_2</code> (0x84), enables dynamic VSID modification, adding header rewrite support for NVGRE tunnel traffic in addition to existing filtering capabilities.
<b>Bug Fixes</b>	See <i>Bug Fixes in this Firmware Version</i> section.

Feature/Change	Description
<b>22.47.1088</b>	
<b>Bug Fixes</b>	See <i>Bug Fixes in this Firmware Version</i> section.

Feature/Change	Description
<b>22.47.1026</b>	
<b>Parallel Suspends of VFs</b>	Added support for parallel suspend operations across multiple VFs.
<b>ADP-RETX Timeout Profile</b>	Firmware now allows the ADP-RETX timeout profile to be configured even when there are open QPs.
<b>Passing Metadata Registers between the NIC Layer and the E-Switch (esw) Layer</b>	This enhancement enables seamless metadata propagation across layers, allowing flow steering rules and packet processing logic to share contextual information such as flow identifiers, source context, or policy tags. It improves coordination between NIC and E-Switch pipelines, enabling more flexible traffic handling and advanced offload capabilities.
<b>Enable/Disable ECN in Upstream</b>	Added the ability to enable or disable ECN in the upstream by allowing the <code>MODIFY_CONG_STATUS</code> and <code>QUERY_CONG_STATUS</code> commands in <code>mlx5_fwctl</code> .
<b>Bug Fixes</b>	See <i>Bug Fixes in this Firmware Version</i> section.

Feature/Change	Description
<b>22.46.3048</b>	
<b>Security Hardening Enhancements</b>	This release contains important reliability improvements and security hardening enhancements. NVIDIA recommends upgrading your devices firmware to this release to improve the devices' firmware security and reliability.

Feature/Change	Description
<b>22.46.1006</b>	
<b>RSS with Crypto Offload</b>	Added support for RSS with crypto offload enabling the NIC to parallelize packet processing across CPU cores while performing encryption/decryption in hardware. Additionally, introduced a new <code>l4_type_ext</code> parameter with values: 0 (None), 1 (TCP), 2 (UDP), 3 (ICMP).
<b>Incoming NC-SI Messages Validation for the payload_len Field</b>	Added an extra validation for the <code>payload_len</code> field in incoming NC-SI messages. Previously, invalid packets might have been accepted; now, such packets are silently dropped.
<b>Bug Fixes</b>	See <i>Bug Fixes in this Firmware Version</i> section.

## 10.2 Bug Fixes History

This section includes history of bug fixes of 3 major releases back. For [older releases history](#), please refer to the relevant firmware versions Release Notes.

Internal Ref.	Issue
4621747 / 4792742 / 4794290	<b>Description:</b> Fixed an issue where parallel accesses to the MCIA register could return incorrect data. In some hosts running <code>ethtool -m &lt;interface&gt;</code> repeatedly (e.g., once per second), this could intermittently report Identifier: 0x00 (unknown/no module), causing health checks to fail.
	<b>Keywords:</b> MCIA register
	<b>Detected in version:</b> 22.47.1026
	<b>Fixed in Release:</b> 22.48.1000
4727303 / 4718947	<b>Description:</b> Fixed an issue in the steering definers used for LAG with IPv6 traffic.
	<b>Keywords:</b> LAG, IPv6 traffic, steering
	<b>Detected in version:</b> 22.47.1026
	<b>Fixed in Release:</b> 22.48.1000
4450570 / 4780432 / 4780433	<b>Description:</b> Fixed an issue where the root complex sent MCTP-over-PCI messages before a BDF was assigned, causing responses to be sent with BDF 0. The fix ensures that MCTP messages routed by ID are ignored until a valid BDF is assigned.
	<b>Keywords:</b> MCTP-over-PCI, BDF, MCTP messages
	<b>Detected in version:</b> 22.47.1026
	<b>Fixed in Release:</b> 22.48.1000

Internal Ref.	Issue
4575696	<b>Description:</b> Fixed an issue where multiple long-running process registers could cause aborted access and timeouts, the internal state is now properly handled.
	<b>Keywords:</b> ibdiagnet2
	<b>Detected in version:</b> 22.46.1006
	<b>Fixed in Release:</b> 22.47.1026
4501554	<b>Description:</b> Fixed an assertion failure that could occur with the E-Switch uplink in specific configurations where the e-switch was disabled and Path Migration was active or GVMIs were using SRQ loopback in SQs. The issue occurred because the firmware attempted to perform cleanup operations when the uplink configuration lacked sufficient capacity. Now, when the E-Switch is disabled and no actions are available in the uplink STE, the firmware connects to the uplink STE instead of copying it.
	<b>Keywords:</b> Path migration, steering
	<b>Detected in version:</b> 22.46.1006
	<b>Fixed in Release:</b> 22.47.1026
4531675	<b>Description:</b> Fixed an incorrect GPIO indication in the INI file that caused a false signal, preventing module initialization.
	<b>Keywords:</b> GPIO indication
	<b>Detected in version:</b> 22.45.1020
	<b>Fixed in Release:</b> 22.47.1026
4529293	<b>Description:</b> Fixed an issue where, during failover or restart, the SM sending a PortInfo MAD to the HCA firmware triggered reinitialization of port buffers, momentarily halting ingress traffic and causing packet drops. The firmware now avoids reconfiguring port buffers when the new configuration matches the current one.
	<b>Keywords:</b> OpenSM
	<b>Detected in version:</b> 22.45.1020
	<b>Fixed in Release:</b> 22.47.1026

Internal Ref.	Issue
4366117	<b>Description:</b> Configuring a small MTU leads to fragmentation of packets critical for the PXE boot process. As a result, the PXE boot filters mistakenly discard these packets, causing the PXE boot to fail.
	<b>Keywords:</b> PXE boot filters
	<b>Discovered in Version:</b> 22.45.1020
	<b>Fixed in Release:</b> 22.46.1006
