9.2 Bug Fixes History 61
10 Legal Notices and 3rd Party Licenses 76

1 Release Notes Update History

Version	Date	Description
28.51.1002	November 2026	Initial release of this Release Notes version.

2 Overview

Firmware which is added at the time of manufacturing, is used to run user programs on the device and can be thought of as the software that allows hardware to run. Embedded firmware is used to control the functions of various hardware devices and systems, much like a computer's operating system (OS) controls the function of software applications. Firmware may be written into read-only memory (ROM), erasable programmable read-only memory (EPROM) or flash memory.

The ConnectX-7 smart host channel adapter (HCA) provides up to four ports of connectivity and 400Gb/s of throughput, hardware-accelerated networking, storage, security, and manageability services at data center scale for cloud, telecommunications, AI, and enterprise workloads. ConnectX-7 empowers agile and high-performance networking solutions with features such as Accelerated Switching and Packet Processing (ASAP2), advanced RoCE, GPUDirect Storage, and in-line hardware acceleration for Transport Layer Security (TLS), IP Security (IPsec), and MAC Security (MACsec) encryption and decryption. ConnectX-7 enables organizations to meet their current and future networking needs in both high-bandwidth and high-density environments.

The ConnectX-7 smart host channel adapter (HCA), featuring the NVIDIA Quantum-2 InfiniBand architecture, provides the highest networking performance available to take on the world's most challenging workloads. ConnectX-7 provides ultra-low latency, 400Gb/s throughput, and innovative NVIDIA In-Network Computing acceleration engines to provide additional acceleration to deliver the scalability and feature-rich technology needed for supercomputers, artificial intelligence, and hyperscale cloud data centers.

2.1 Firmware Download

Please visit Firmware Downloads.

2.2 Document Revision History

A list of the changes made to this document are provided in Document Revision History.

3 Firmware Compatible Products

These are the release notes for the NVIDIA® ConnectX®-7 adapters firmware. This firmware supports the following protocols:

- InfiniBand - NDR, HDR, EDR, FDR, SDR
- Ethernet - 400GAUI4 C2M, 400GAUI8 C2M, 200GAUI2 C2M, 200GAUI4 C2M, 100GAUI1 C2M, 100GAUI1_SFE C2M, 100GAUI2 C2M, CAUI4 C2M, 50GAUI1 C2M, 50GAUI2_RS_NS C2M, 50GAUI2_FC_NS C2M, 25GAUI1_RS C2M, 25GAUI1_FC C2M, 25GAUI1 C2M, 40GAUI4 C2M, 10GAUI1 C2M, 400GAUI4 CR4, 400GAUI8 CR8, 200GAUI2 CR2, 200GAUI4 CR4, 100GAUI1 CR1, 100GAUI1_SFE CR1, 100GAUI2 CR2, CAUI4 CR4, 50GAUI1 CR1, 50GAUI2_RS_NS CR2, 50GAUI2_FC_NS CR2, 40GAUI4 CR4, 10GAUI1 CR1, 1000BaseX CR1
- PCI Express 5.0, supporting backwards compatibility for v4.0, v3.0, v2.0 and v1.1

When connecting an NVIDIA-to-NVIDIA adapter card in ETH PAM4 speeds, Auto-Neg should always be enabled.

3.1 Supported Devices

Refer to the hardware documentation for the list of supported devices.

3.2 Driver Software, Tools and Switch Firmware

The following are the drivers' software, tools, switch/HCA firmware versions tested that you can upgrade from or downgrade to when using this firmware version:

	Supported Version
ConnectX-7 Firmware	28.51.1002 / 28.50.1002 / 28.49.1014
DOCA-HOST	3.6.0 / 3.5 0 **Note:** For the list of the supported Operating Systems, please refer to the driver's Release Notes.
WinOF-2	26.10.50000 / 26.7.50000 / 26.1.50000 **Note:** For the list of the supported Operating Systems, please refer to the driver's Release Notes.
MFT	4.38.0-134 / 4.37.0-154 / 4.36.0-147 **Note:** For the list of the supported Operating Systems, please refer to the driver's Release Notes.

	Supported Version
FlexBoot	3.9.101
UEFI	14.42.15
MLNX-OS	3.12.6000 onwards
Cumulus	5.15.0 onwards
NVIDIA Quantum-2 Firmware	31.2016.2054 onwards

4 Changes and New Features

Security Hardening Enhancements: This release contains important reliability improvements and security hardening enhancements. NVIDIA recommends upgrading your devices' firmware to this release to improve the devices' firmware security and reliability.

To generate PLDM packages for firmware updates, users must install and use the MFT version that corresponds with the respective firmware release.

Feature/Change	Description
28.51.1002	
PCIe TLP Processing Hints (TPH) support	Added support for the PCIe TLP Processing Hints (TPH) Extended Capability on ConnectX-7, enabling steering tags for non-RDMA (TCP/IP) traffic when used with a supporting driver.
Enforce CC Hints (AppAware) Capability Check in Firmware	CC hint capability checking was moved from the DPA (pcc_send_set_nv_conf) to the firmware. The logic itself is unchanged. As part of the move, is_cc_hint_general_object_cap now includes the limitations that were previously part of pcc_send_set_nv_conf.
Live Firmware Patch (LFWP) on LTS Branches	Starting with LTS 2026, supported devices can apply LTS patches via live update within the same branch, with no firmware reset required.
Multiplane vport speed reporting	Added explicit speed reporting for two aggregated speed notions per vport: cap_tx_speed (the maximum speed the vport could reach under any circumstances, reflecting the internal connection topology) and effective_tx_speed (the maximum speed currently available to the vport, accounting only for link-up ports).
Auto return transceiver to high-power mode	When firmware detects a port link-up-to-down event at runtime, it periodically polls the module state and automatically recovers the module to high-power mode if it is found in low-power mode.
DOCA Flow CT support in VNF mode	Added support for local eswitch per VF in VNF mode, extending DOCA Flow Connection Tracking (CT) functionality to virtual network function deployments.
Bug Fixes	See *Bug Fixes in this Firmware Version* section.

4.1 Customer Affecting Changes

4.1.1 Changes in This Release

This section provides a list of changes that took place in the current version and break compatibility/interface, discontinue support for features and/or OS versions, etc.

Introduced in Version	Description
N/A	N/A

4.1.2 Changes Planned for Future Releases

This section provides a list of changes that will take place in a future version of the product and will break compatibility/interface, discontinue support for features and/or OS versions, etc.

Planned for Version	Description
N/A	N/A

4.1.3 Changes in Earlier Releases

This section provides a list of changes that took place throughout the past two major releases that broke compatibility/interface, discontinued support for features and/or OS versions, etc.

For an archive of all changes, please refer to the Release Notes History section.

Introduced in Version	Description	Customer Impact and Recommendation
28.48.1000	Starting with this release, ConnectX CoRIMs/cbor files are available through the NVIDIA Attestation RIM service. RIM service documentation is available here. Bundling ConnectX CoRIMs with the firmware zip files will be retired in a future release, and customers should plan to transition to the NVIDIA RIM service.	
28.47.1026	To align with updated Microsoft UEFI Secure Boot requirements and the upcoming end-of-life of the 2011 Certificate Authority (CA), NVIDIA is transitioning to the 2023 CA. To ensure successful loading of the Expansion ROM (ExpROM) during the UEFI Secure Boot process, system BIOS and operating system trust stores must be updated to include the 2023 CA. **Note:** When performing a firmware update of ConnectX and BlueField devices the new certificate is required for Secure Boot. To continue supporting Secure Boot, systems must be updated to recognize the "Microsoft Option ROM UEFI CA 2023."	
28.47.1026	Starting with the October 2025 firmware release, and for all subsequent versions, compatibility with the older MFT releases (4.31.0-149 and 4.30.0-139) is no longer supported.	
28.46.1006	Renamed firmware-generated PLDM images to include the firmware name and PSID.	

Introduced in Version	Description	Customer Impact and Recommendation
28.43.2026	**DPA Outbox Blocking-Mode** Due to a silicon issue, as of firmware version 28.43.2026, the DPA outbox is configured to operate in non-blocking mode, causing DPA outbox requests to complete immediately without waiting for actual completion. As a result, the DPA stack must poll a "busy" bit before initiating another DPA outbox operation.	Update the firmware version to 28.43.2026 or higher or update the BF-Bundle (containing this firmware) and DOCA-Host to 2.9.x or higher. This is mandatory for customers programming the DPA (e.g., DPA with DOCA PCC, or using NVIDIA turn-key apps which utilize the DPA (virtio-net/blk/fs, NVMe).
	DPA Thread Context Due to internal-stack API changes, as of firmware v28.43.2026, DPA thread context is changed in the DPA. This affects the overlying DPA stack. As of firmware version 28.43.2026, internal-stack API changes have altered the DPA thread context, impacting the overlying DPA stack.	

4.1.4 Discontinued Features

List of features which are supported in previous generations of hardware devices.

N/A

4.2 Declared Unsupported Features

This section provides a list of features that are not supported by the software.

N/A

5 Bug Fixes in this Firmware Version

5Internal ref.	Issue
5343627 / 5105066 / 5343844 / 5343877	**Description:** Resolved an issue where the link failed to come up with a specific LPO (linear pluggable optics) module. Dedicated SI parameters were added for this module.
	Keywords: SI parameters, LPO module
	Detected in version: 28.50.1002
	Fixed in release: 28.51.1002
5350445	**Description:** Resolved an issue where an active congestion control flow context might be outdated unexpectedly when a large number of congestion control flows are active.
	Keywords: PCC
	Detected in version: 28.50.1002
	Fixed in release: 28.51.1002
5298967	**Description:** Resolved a performance degradation related to LibOS on ConnectX-7 200G adapters where running ib_write_bw on both ports at the same time reduced bandwidth.
	Keywords: ib_write_bw, bandwidth, performance, dual port, LibOS
	Detected in version: 28.50.1002
	Fixed in release: 28.51.1002
5343689 / 5300572	**Description:** Resolved an issue where, under rare timing conditions, a QP scheduled for transmission could lose synchronization with the QoS scheduling mechanism. A built-in recovery flow detects this condition and re-activates the affected QP. The recovery flow is now enabled by default, and the issue that caused it to skip VFs associated with non-zero Physical Functions has been resolved.
	Keywords: QP, QoS, VF, Multi-PF, BlueField, vRDMA, RoCE, transmission
	Detected in version: 28.47.1026
	Fixed in release: 28.51.1002
5329814 / 5344856 / NVbug 6887282	**Description:** Resolved an issue where NSM Type 3 Get Inventory Information manufacturing-date queries (command 0x0C, property 0x08) failed.
	Keywords: NSM, VPD, serial number, manufacturing date, Get Inventory Information, ISO week
	Detected in version: 28.50.1002
	Fixed in release: 28.51.1002
5323929 / NVBug 6536162	**Description:** Resolved a PLDM firmware update failure caused by an insufficient message retry timeout. The timeout has been increased from 1 to 1.5 seconds.
	Keywords: PLDM, firmware update, retry timeout

5Internal ref.	Issue
	Detected in version: 28.48.1000
	Fixed in Release: 28.51.1002
4601097 / NVBug 5166755	**Description:** Resolved an issue in ERoT metadata where flash addresses used during firmware upgrade were defined for a 32Mb flash layout. On B200 platforms, which use a 64Mb flash with a different memory layout, this caused incorrect address mapping when copying data between flashes. The addresses have been corrected to align with the 64Mb flash layout.
	Keywords: ERoT, flash layout, B200, firmware upgrade, address mapping
	Detected in version: 28.50.1002
	Fixed in Release: 28.51.1002
5299142	**Description:** Resolved a firmware fatal assert (ext_synd 0x75) caused by CRspace writes targeting latency counter blocks that were not backed by hardware logic. The latency block whitelist has been updated to prevent such writes from being processed by the firmware.
	Keywords: ext_synd 0x75, CRspace, latency block whitelist, fatal assert
	Detected in version: 28.50.1002
	Fixed in Release: 28.51.1002
5257510	**Description:** Resolved an I2C driver issue where read transactions to MCTP addresses caused non-compliant SCL clock stretching. The timeout is now aligned to the SMBus specification (25 ms).
	Keywords: I2C, MCTP, SCL clock stretching, SMBus
	Detected in version: 28.50.1002
	Fixed in Release: 28.51.1002
5235696	**Description:** Resolved incorrect handling of MACsec confidentiality-offset values during conversion between the software interface and the hardware SADB, which could result in improper packet encryption.
	Keywords: MACsec, confidentiality-offset, SADB, packet encryption
	Detected in version: 28.50.1002
	Fixed in Release: 28.51.1002
5157189 / 4866555	**Description:** Resolved an issue where, when massive flows occurred in parallel with PCC, INIT2RTR could report a false alarm with syndrome 0x7 "dead IRISC."
	Keywords: IRISC, dead IRISC, PCC, INIT2RTR, syndrome 0x7
	Detected in version: 28.47.1026

5Internal ref.	Issue
	Fixed in Release: 28.51.1002
5130021	**Description:** Resolved a ZTR RTT CC issue where the CNP_VLD_RTT parameter was ignored on the first congestion event, causing the algorithm to misinterpret a large RTT value as congestion and reduce bandwidth.
	Keywords: ZTR RTT CC, CNP_VLD_RTT, congestion, RDMA BW
	Detected in version: 28.49.1014
	Fixed in release: Host FW 51.1000
5099299 / 5122462	**Description:** Resolved several PLDM RDE (Type 6) issues, including: Port.Reset action failure on ports that were not link-up; incomplete multipart request payload transfers; missing validation of declared request payload lengths against the message content.
	Keywords: PLDM RDE, Type 6, Port.Reset, multipart transfer
	Detected in version: 28.49.1014
	Fixed in Release: 28.51.1002
5093878 / 5138237	**Description:** Resolved a credit leak and resulting TX timeouts that occurred when a DPA application used cross-VHCA, cross-host doorbell messaging via DPA Outbox.
	Keywords: DPA Outbox, credit leak, TX timeout, cross-VHCA, doorbell
	Detected in version: 28.46.3048
	Fixed in Release: 28.51.1002
5081175	**Description:** Resolved a ZTR RTT CC issue in topology-aware mode where fabric round-trip times exceeding 200 µs caused false congestion signals and sustained below-line-rate throughput.
	Keywords: ZTR RTT CC, topology-aware, fabric RTT, congestion
	Detected in version: 28.50.1002
	Fixed in Release: 28.51.1002
5019624	**Description:** Resolved an issue where a PCIe SBR did not reset the MCTP discovery state, causing the device to miss EndpointDiscovery requests.
	Keywords: PCIe SBR, MCTP, EndpointDiscovery, reset
	Detected in version: 28.50.1002
	Fixed in Release: 28.51.1002
4988444	**Description:** Resolved a false-positive "IRISC stuck" detection after cold reboot on Windows.
	Keywords: IRISC stuck, Windows, cold reboot, false positive

5Internal ref.	Issue
	Detected in version: 28.49.1014
	Fixed in Release: 28.51.1002

6 Known Issues

VF Network Function Limitations in SR-IOV Legacy Mode

Dual Port Device	Single Port Device
127 VF per PF (254 functions)	127

VF Network Function Limitations in Switchdev Mode

Dual Port Device	Single Port Device
127 VF per PF (254 functions)	127

VF+SF Network Function Limitations in Switchdev Mode

Dual Port Device	Single Port Device
• 127 VF per PF (254 functions) • 512 PF+VF+SF per PF (1024 functions)	• 127 VF (127 functions) • 512 PF+VF+SF per PF (512 functions)

Internal ref.	Issue
5329699 / 5388950	**Description:** Setting adp_retx_profile_id to 0 through ROCE_ACCL after a user profile has been configured is silently ignored.
	Workaround: N/A
	Keywords: ROCE_ACCL, adp_retx_profile_id
	Detected in version: 28.51.1002
5341753 / 5224379	**Description:** Under rare conditions, a firmware health assert (synd 0x8, ext_synd 0x0050) may occur, potentially causing packet drops and a device reboot.
	Workaround: N/A
	Keywords: Steering, Packet drops
	Detected in version: 28.51.1002
4759910 / 5011023	**Description:** During an ISSU or Live Firmware Patch over InfiniBand, the NIC may be temporarily unreachable by the OpenSM subnet manager for the duration of the ISSU process, which can result in "Failed to get sminfo" errors.
	Workaround: N/A
	Keywords: ISSU, LFWP, InfiniBand, OpenSM, sminfo
	Detected in version: 28.51.1002
4705948 / 4684233	**Description:** A bandwidth degradation of approximately 25% may be observed when performing DC RDMA Read operations between ConnectX-7 (NDR) and ConnectX-8 using a low number of QPs (1–16). The degradation diminishes as QP count increases.
	Workaround: N/A
	Keywords: DC RDMA Read, bandwidth degradation, NDR, QP

Internal ref.	Issue
	Detected in version: 28.51.1002
4705241 / 4684233	**Description:** When Quantum-2 is part of an XDR topology, serving as a leaf switch connected to NDR-based hosts, a bandwidth degradation of approximately 3–7 Gb/s is expected.
	Workaround: N/A
	Keywords: Quantum-2, XDR, NDR, leaf switch, bandwidth degradation
	Detected in version: 28.51.1002
4628696	**Description:** When HASH LAG single QP is enabled, ib_read_bw for a single QP over hash LAG can reach up to 337 Gbps, while ib_write_bw for a single QP can achieve up to 390 Gbps.
	Workaround: N/A
	Keywords: HASH LAG, single QP, ib_read_bw, 337 Gbps
	Detected in version: 28.51.1002
4436843	**Description:** When the link recovery feature is enabled with a link-down timeout of 0, port recovery counters are unexpectedly reset.
	Workaround: N/A
	Keywords: link recovery, PPRM, recovery counter, link-down timeout
	Detected in version: 28.51.1002

Internal Ref.	Issue
4970263 / 4989004	**Description:** A high-temperature assert may be reported only the first time the chip reaches the thermal threshold.
	Workaround: N/A
	Keywords: Temperature
	Detected in version: 28.49.1014
4893565 / 4532684	**Description:** Occasional high spikes in operation latency may be observed.
	Workaround: N/A
	Keywords: Latency
	Detected in version: 28.48.1000
4901395 / 4919262	**Description:** When PXE is enabled for both Legacy (FlexBoot) and UEFI drivers, the UEFI driver supports only a single TFTP session after the DHCP handshake.
	Workaround: For scenarios that require multiple concurrent TFTP sessions, disable PXE filters via the HCA HII menu.
	Keywords: PXE, Filter enabled, UEFI

Internal Ref.	Issue
	Detected in version: 28.47.1088
4893639	**Description:** Direct Memory Access (DMA) protection is not supported in the ipxe.efi driver.
	Workaround: N/A
	Keywords: DMA
	Detected in version: 28.47.1088
4635705	**Description:** The power-up time of a server with multiple ConnectX NICs may be significantly longer when DMA protection is enabled in the server BIOS and the server has five or more NICs configured for InfiniBand.
	Workaround: N/A
	Keywords: Power-up time, DMA protection BIOS
	Detected in version: 28.49.1014
4285063	**Description:** mlxconfig may report incorrect default INI parameter values when queried, even though the Current and Next boot values are reported correctly.
	Workaround: N/A
	Keywords: mlxconfig
	Detected in version: 28.48.1000
4604969	**Description:** Probe packets might be dropped at the transmission stage when multiple congestion control flows are active.
	Workaround: N/A
	Keywords: PCC, RTT, probe
	Detected in version: 28.47.1026
4436870	**Description:** PCIe link speed may degrade after a disable/enable operation.
	Workaround: A manual retrain command is required to restore full speed.
	Keywords: PCIe
	Detected in version: 40.47.1026
4496642	**Description:** The timestamps (t2, t4) of the received RTT probes are taken from the free-running clock, even when ROCE_CC_RTT_TIMESTAMP_FORMAT is set to 0x02. The format of all RTT probe timestamps can be found in HCA_CAP.rtt_timestamp_format.
	Workaround: N/A
	Keywords: RTT RTC timestamp
	Detected in version: 28.47.1026
4705241	**Description:** When Quantum-2 is part of an XDR topology, serving as a leaf switch connected to NDR-based hosts, a bandwidth degradation of approximately 3–7 Gb/s is expected.
	Workaround: N/A
	Keywords: XDR, NDR, Quantum-2
	Detected in version: 28.47.1026

Internal Ref.	Issue
4705948	**Description:** When using DC as the InfiniBand transport type to perform an ib_read RDMA operation between ConnectX-7 (NDR) and ConnectX-8, a bandwidth degradation of approximately 25% may be observed when using a low number of QPs (1–16). The performance degradation diminishes as the number of QPs increases.
	Workaround: N/A
	Keywords: DC, ib_read RDMA, NDR, performance
	Detected in version: 28.47.1026
4685736	**Description:** Creating a DPA process that allocates a 128 MB data segment and loads a dynamic library may fail with syndrome 0xdc30ac.
	Workaround: Limit the DPA application's data segment size to 64 MB.
	Keywords: DPA
	Detected in version: 28.47.1026
4628696	**Description:** When HASH LAG single QP is enabled, ib_read_bw for a single QP over hash LAG can reach up to 337 Gbps, while ib_write_bw for a single QP can achieve up to 390 Gbps.
	Workaround: N/A
	Keywords: HASH LAG single QP
	Detected in version: 28.47.1026
4657082	**Description:** PTP holdover is not supported on FireFly without SyncE; it is available only when using Servo.
	Workaround: N/A
	Keywords: PTP Holdover
	Detected in version: 28.47.1026
4394475	**Description:** The existing congestion control configuration applies globally, rather than on a per-priority basis.
	Workaround: Ensure that the configuration values for all priorities are aligned in either `mlxconfig ROCE_CC_PRIO_MASK_P$port` or `sysfs ecn/roce_rp/enable/$port`.
	Keywords: Congestion control, ROCE_CC_PRIO
	Detected in version: 28.45.1020
4063662	**Description:** The 1pps Timing Error (TE) in Noise Generation (Class B) shows a constant offset when RS-FEC is disabled in the mlxlink option.
	Workaround: N/A
	Keywords: PTP, 1PPS
	Detected in version: 28.45.1020
4303583	**Description:** The query_header_modify_pattern command may produce inaccurate results when specific fields are used.
	Workaround: N/A
	Keywords: query_header_modify_pattern command
	Detected in version: 28.45.1020

Internal Ref.	Issue
3875417	**Description:** For systems that support a large number of VFs (200 or more) and can open over a million QPs, the FLR may take about 1 second per function resulting in a driver timeout.
	Workaround: N/A
	Keywords: VFs, QPs, FLR
	Detected in version: 28.44.1204
4193036	**Description:** The initial allocation of DPA_THREAD on group affinity allocates memory for all EUs, including stack, core dump, and other resources.
	Workaround: N/A
	Keywords: DPA
	Detected in version: 28.44.1204
4030457	**Description:** This release does not support InfiniBand (IB) over Windows OS when using ConnectX-7 MCX75310AAS-NEAT and MCX75310AAC-NEAT OPNs.
	Workaround: N/A
	Keywords: InfiniBand, Windows
	Detected in version: 28.42.1000
-	**Description:** Downgrading the following adapter cards (MCX713104AS-ADAT & MCX713104AC-ADAT) to a lower version than 20.39.2048 is not supported.
	Workaround: N/A
	Keywords: Downgrade
	Discovered in Version: 28.40.1000
3728450	**Description:** SW_RESET with a pending image is currently not supported.
	Workaround: N/A
	Keywords: SW_RESET
	Discovered in Version: 28.40.1000
3614362	**Description:** When connected to a Spectrum-1 switch system using NRZ 25G optic module supporting DME in NO FEC, an EFF BER of -13 may be seen once in 200 toggles.
	Workaround: To raise the link, re-toggle the port.
	Keywords: Spectrum-1, NRZ, BER, port toggling
	Discovered in Version: 28.39.1002
3629216	**Description:** mlxfwreset level 3 command is not supported for MCX750500B-0D00 / MCX750500B-0D0K / MCX755206AS-NEAT-N P/N.
	Workaround: 1. Enable mlxfwreset level 4. `mlxfwreset -d <dev> r -l 4 -y` 2. Reboot the server.
	Keywords: mlxfwreset level 3
	Discovered in Version: 28.39.1002

Internal Ref.	Issue
-	**Description:** The I^2C clock fall time is lower than the 12ns minimum defined in the I2C-bus specification. For further information, refer to the I²C-bus Specification, Version 7.0, October 2021, https://www.i2c-bus.org/ .
	Workaround: N/A
	Keywords: I^2C clock
	Discovered in Version: 28.39.1002
3179534	**Description:** 25G/lane speeds are not supported on 200GbE optic cables.
	Workaround: N/A
	Keywords: Cables, 200GbE
	Discovered in Version: 28.39.1002
3435259	**Description:** The host enables the device to populate only 1 bus. When opening extra 2 Physical ports, moving from dual-port to quad-port, the user can open 2 less Virtual Functions.
	Workaround: N/A
	Keywords: VF, dual-port, quad-port
	Discovered in Version: 28.39.1002
3525865	**Description:** Unexpected system behavior might be observed if the driver is loaded while reset is in progress.
	Workaround: N/A
	Keywords: Sync 1 reset, firmware reset
	Discovered in Version: 28.39.1002
3363753	**Description:** The link is down when connected to the MMS1V00-WM (DR4) optical module.
	Workaround: N/A
	Keywords: 400G, link down
	Discovered in Version: 28.38.1002
3439438	**Description:** When connecting to a High Speed Traffic Generator in 400G speed, the linkup time may takes up to 3 minutes.
	Workaround: N/A
	Keywords: 400G, linkup time
	Discovered in Version: 28.38.1002
-	**Description:** When upgrading from firmware v28.35.2000 to a newer one, the default port speeds of adapter cards MCX755106AS-HEAT/ MCX755106AC-HEAT will change from InfiniBand to Ethernet.
	Workaround: To change it back to InfiniBand, please follow the instructions in the ConnectX-7 hardware User Manual.

Internal Ref.	Issue
	Keywords: Firmware upgrade, port type, MCX755106AS-HEAT/ MCX755106AC-HEAT
	Discovered in Version: 28.37.1014
3376224	**Description:** FEC override is not supported when working with NRZ speeds on PAM4 Optical modules.
	Workaround: N/A
	Keywords: FEC override, NRZ, PAM4
	Discovered in Version: 28.37.1014
3262845	**Description:** In the ConnectX-7 adapter card with P/N MCX750500B-0D0K, the "Fatal Error Reporting Enable" bit controls both the fatal and the non-fatal ERR MSG forwarding. The "Non-Fatal Error Reporting Enable" bit does not affect the ERR MSG forwarding.
	Workaround: N/A
	Keywords: Fatal Error Reporting Enable" bit, PCIe, MCX750500B-0D0K
	Discovered in Version: 28.36.1010
3329109	**Description:** MFS1S50-H003E cable supports only HDR rate when used as a split cable.
	Workaround: N/A
	Keywords: HDR, split cable, MFS1S50-H003E
	Discovered in Version: 28.36.1010
2844036	**Description:** When using the "Dual Write" feature with QP buffer bigger than the maximum outstanding WQEs (128), the data being sent on the standby QP can be corrupted.
	Workaround: Limit the QP buffer size when using "Dual Write" up to 128 WQEs.
	Keywords: Dual-write, QP
	Discovered in Version: 28.36.1010
3178339	**Description:** PCIe PML1 is disabled.
	Workaround: N/A
	Keywords: PCIe PML1
	Discovered in Version: 28.35.1012
3033910	**Description:** BAR misses caused by a memory write/read actions are not reported in the AER and the device status.
	Workaround: N/A
	Keywords: BAR miss, AER
	Discovered in Version: 28.34.4000
3140645	**Description:** 3rd party servers may hang after warm reboot due to the PCIe switch.
	Workaround: N/A
	Keywords: PCIe, 3rd party servers
	Discovered in Version: 28.34.4000
-	**Description:** Changing dynamic PCIe link width is not supported.
	Workaround: N/A

Internal Ref.	Issue
	Keywords: PCIe
	Discovered in Version: 28.34.1002
3141072	**Description:** The "max_shaper_rate" configuration query via QEEC mlxreg returns a value translated to hardware granularity.
	Workaround: N/A
	Keywords: RX Rate-Limiter, Multi-host
	Discovered in Version: 28.34.1002
2870970	**Description:** GTP encapsulation (flex parser profile 3) is limited to the NIC domain. Encapsulating in the FDB domain will render a 0-size length in GTP header.
	Workaround: N/A
	Keywords: GTP encapsulation
	Discovered in Version: 28.34.1002
3081264	**Description:** 10G/40G speeds are not supported on MFS1S00-XXXX modules (200G optics) in ConnectX-7 adapter cards.
	Workaround: N/A
	Keywords: Optical cables
	Discovered in Version: 28.33.4030
3070590	**Description:** PLL modules are not supported in ConnectX-7 ethernet adapter cards.
	Workaround: N/A
	Keywords: PLL
	Discovered in Version: 28.33.4030
3070409	**Description:** When connecting a ConnectX-7 adapter card to a ConnectX-6 Dx or an NVIDIA Spectrum-3 switch, NRZ speeds are not raised when using 200GbE optical cable.
	Workaround: Configure PHY_FEC_OVERRIDE on the ConnectX-7 side for the requested speed.
	Keywords: Optical cables, NRZ, ConnectX-6 Dx, NVIDIA Spectrum-3, 200GbE optical cable
	Discovered in Version: 28.33.4030
-	**Description:** Upgrading to firmware 28.33.2028 from any previous Engineering Sample (earlier than version 28.98.2406) must be done before installing WinOF-2 v2.90 driver and requires going through the following steps: 1. Upgrade to 28.98.2406 version while the driver is disabled. 2. Upgrade to firmware version 28.33.2028 (the driver can be enable at this stage).
	Workaround: N/A
	Keywords: Firmware upgrade
	Discovered in Version: 28.33.2028
-	**Description:** Downgrading from firmware 28.33.2028 to any previous Engineering Sample firmware is not supported.
	Workaround: N/A
	Keywords: Firmware downgrade
	Discovered in Version: 28.33.2028

7 PreBoot Drivers (FlexBoot/UEFI)

7.1 FlexBoot Changes and New Features

For further information, please refer to the FlexBoot Release Notes.

7.2 UEFI Changes and Major New Features

For further information, please refer to the UEFI Release Notes.

8 Validated and Supported Cables and Switches

8.1 Validated and Supported Cables and Modules

8.1.1 Cables Lifecycle Legend

Lifecycle Phase	Definition
EOL	End of Life
LTB	Last Time Buy
HVM	GA level
MP	GA level
P-Rel	GA level
Preliminary	Engineering Sample
Prototype	Engineering Sample

8.1.2 InfiniBand/Ethernet Support

⚠ Upon firmware upgrade, after reset, the default port configuration could be changed.

To set the right configuration, run:

```
mlxconfig -d <mst device> s LINK_TYPE_P1=1/2 LINK_TYPE_P2=1/2
```

where:

- LINK_TYPE_P1 - sets the configuring protocol for port 1
- LINK_TYPE_P2 - sets the configuring protocol for port 2
- (1/2) - values used for the different protocols:
  - 1 – for InfiniBand
  - 2 - for Ethernet

8.1.3 NDR / 400GbE / 800GbE Cables

⚠ * MMA4Z00-NS-FLT transceiver is used with the following ConnectX-7 adapter cards ONLY: MCX750500B-0D0K / MCX750500C-0D0K / MCX750500B-0D00 / MCX750500C-0D00.

Speed	NVIDIA SKU	Legacy OPN	Description
NDR	920-9B210-00FN-xxx	QM9790	NVIDIA Quantum-2 based NDR InfiniBand EVB Switch, 64 NDR ports, 32 OSFP ports, non-blocking switching capacity of 51.2Tbps, 2 Power Supplies (AC), Standard depth, Unmanaged, P2C airflow, Rail Kit, RoHS6
NDR	920-9B210-00FN-xxx	QM9700	NVIDIA Quantum 2 based NDR InfiniBand Switch, 64 NDR ports, 32 OSFP ports, 2 Power Supplies (AC), Standard depth, Managed, P2C airflow, Rail Kit
400 GbE	920-9N42F-00RI-xxx	SN5600	NVIDIA Spectrum-4 based 800GbE 2U Open Ethernet switch with ONIE and NOS Authentication, 64 OSFP ports and 1 SFP28 port, 2 power supplies (AC), x86 CPU, Secure-boot, standard depth, C2P airflow, Tool-less Rail Kit
400 GbE	920-9N301-00xB-xxx	SN4700	NVIDIA Spectrum-3 based 400GbE, 1U Open Ethernet switch, 32xQSFP-DD ports, x86 CPU, standard depth
400 GbE	920-9N312-00xB-xxx	SN4410	NVIDIA Spectrum-3 based 400GbE 1U Open Ethernet switch, 24 QSFPDD28 and 8 QSFP-DD ports, 2 Power Supplies (AC), x86 CPU, standard depth
400 GbE	N/A	Wedge 400	Meta: Wedge 400-48X 400GbE Data Center Switch
400 GbE	N/A	Cisco Nexus 3432D-S	Cisco Nexus 3432D-S, 32 fixed 400-Gigabit Ethernet QSFP-DD ports with backward compatibility for QSFP56, QSFP28, and QSFP+

8.2.2 HDR / 200GbE Switches

Speed	NVIDIA SKU	Legacy OPN	Description
HDR	920-9B110-00FH-xxx	MQM8700	NVIDIA Quantum HDR InfiniBand Switch, 40 QSFP56 ports, 2 Power Supplies (AC), x86 dual core, standard depth, P2C airflow, Rail Kit
HDR	920-9B110-00FH-xxx	MQM8790	NVIDIA Quantum HDR InfiniBand Switch, 40 QSFP56 ports, 2 Power Supplies (AC), unmanaged, standard depth, P2C airflow, Rail Kit
200GbE	920-9N302-00xA-xxx	MSN4600V	NVIDIA Spectrum-3 based 200GbE 2U Open Ethernet switch, 64 QSFP56 ports, 2 Power Supplies (AC), x86 CPU, standard depth

Speed	NVIDIA SKU	Legacy OPN	Description
200GbE	920-9N210-C1x7-xxx	MSN3700	NVIDIA Spectrum-2 based 200GbE Open Ethernet switch, 32 QSFP56 ports, x86 CPU, standard depth

8.2.3 100GbE Switches

Speed	NVIDIA SKU	Legacy OPN	Description
100GbE	920-9N302-00xA-xxx / 920-9N302-00x7-xxx	SN4600-XXXX	64-port Non-blocking 100GbE Open Ethernet Switch System
100GbE	920-9N201-00x7-xxx	SN3700C-XXXX	32-port Non-blocking 100GbE Open Ethernet Switch System
100GbE	920-9N213-00x7-xxx	SN3420-XXXX	48 SFP + 12 QSFP ports Non-blocking 100GbE Open Ethernet Switch System
100GbE	920-9N101-00x7-xxx	SN2700-XXXX	32-port Non-blocking 100GbE Open Ethernet Switch System
100GbE	N/A	QFX5200-32C-32	32-port 100GbE Ethernet Switch System
100GbE	N/A	7060CX-32S	32-port 100GbE Ethernet Switch System
100GbE	N/A	3232C	32-port 100GbE Ethernet Switch System
100GbE	N/A	N9K-C9236C	36-port 100GbE Ethernet Switch System
100GbE	N/A	93180YC-EX	48-port 25GbE + 6-port 100GbE Ethernet Switch System
100GbE	N/A	S6820-56HF	H3C S6850-56HF L3 Ethernet Switch with 48 SFP28 Ports and 8 QSFP28 Ports
100GbE	N/A	BMS T7032-IX7	32 QSFP28 ports support for 10/25/40/50/100GbE

9 Release Notes History

9.1 Changes and New Feature History

⚠ This section includes history of changes and new feature of 3 major releases back. For older releases history, please refer to the relevant firmware versions.

Feature/Change	Description
28.50.1002	
Bug Fixes	See *Bug Fixes in this Firmware Version* section.

Feature/Change	Description
28.49.1014	
PCC/ZTR-RTT Congestion-Control Histogram Collection	Added support for Congestion-Control histogram collection in the PCC/ZTR-RTT algorithm. After enabling this capability, customers can read RATE and RTT histogram counters for PCC-managed flows.
ZTR_RTTCC Tunable Probe Timeout	Added a new parameter to the ZTR_RTTCC algorithm to define the probe-packet timeout threshold.
PSP Transport Packet Reformat	Added support for a new packet reformat type for PSP transport packets. This reformat removes the PSP trailer and the UDP + PSP transport headers, and updates the IP Protocol field based on the PSP next_header value.
Bug Fixes	See *Bug Fixes in this Firmware Version* section.

Feature/Change	Description
28.48.1000	
DOCA PCC	The DOCA PCC NP application now enables the NIC to insert the RTT response transmit timestamp in hardware, reducing software-induced jitter and improving the accuracy and consistency of RTT measurements.
DPA Process Limit Update	The system-wide limit for DPA processes has been reduced to **30**. This total includes both user processes across all GVMIs and internal ProgCC processes. The `max_dpa_processes` value reported to the user is calculated as: `max_dpa_processes=30-number_of_progcc_processes`
MAD Access to ADP Retransmission Histogram Registers	Added MAD (Management Datagram) access to the new Adaptive Retransmission Histogram registers. Users can configure the histogram by issuing VSP MAD GET/SET operations to ADP_RETX_HISTOGRAM_CONFIG (0xC01D), and retrieve histogram data via VSP MAD GET to ADP_RETX_HISTOGRAM_READ (0xC01E) (using the required VSP MAD header values and TLV format). This enables configuring and collecting adaptive retransmission timeout statistics through the MAD interface.

Feature/Change	Description
28.48.1000	
Host Rate Limiting Support Above 255 Gbps	Host rate limiting has been extended to support bandwidth values above 255 Gbps. To remove the previous cap, a new `max_bw_value_msb` field was added to `est_global`, providing additional MSB bits to represent higher bandwidth values. With this enhancement, firmware and host tooling can correctly configure and report rate limits beyond 255 Gbps on high-speed links.
PLDM PDR Repository Change Event Support	PLDM now supports the PDR Repository Change event type, enabling notification to the BMC when PDRs change. With this flow, the BMC can detect cable insertion/removal events. Refer to DSP0248 for details.
Parallel Save/Load Support for VF Migration	Added support for running save and load operations in parallel, enabling multiple contexts (e.g., multiple VFs) to be checkpointed and restored concurrently instead of serially. This reduces overall migration time and improves scalability in environments that need to migrate or recover many VFs at once.
NVGRE VSID Modify-Header Support	Extended packet modify-header operations to support `set` and `copy` actions on the NVGRE VSID (Virtual Subnet Identifier). A new field, `TUNNEL_HDR_DW_2` (0x84), enables dynamic VSID modification, adding header rewrite support for NVGRE tunnel traffic in addition to existing filtering capabilities.
VHCA Migration State Output	Added a new output field, `migration_state`, to `QUERY_VHCA_MIGRATION_STATE`. Software uses this field to make live-migration flow decisions, specifically to signal when it is not a good time to transition into the stop-copy stage.
Bug Fixes	See *Bug Fixes in this Firmware Version* section.

Feature/Change	Description
28.47.1088	
Bug Fixes	See *Bug Fixes in this Firmware Version* section.

Feature/Change	Description
28.47.1026	
Separate Lossless Buffer for Priorities 3 and 4	Added support for multiple lossless buffer configurations in PFC. The firmware now automatically calculates buffer sizes and maps priorities to their respective buffers.
DPA Partition Creation	Access control was added to ensure that only the VHCA instance that created a DPA partition is permitted to modify or delete it.
DPA TIMER	DPA TIMER functionality has been exposed through the MTCTR access register, allowing direct access by applications.
DPA Manifest	A new DPA Manifest mechanism was introduced to define and manage application permissions.

Feature/Change	Description
28.47.1026	
Passing Metadata Registers between the NIC Layer and the E-Switch (esw) Layer	This enhancement enables seamless metadata propagation across layers, allowing flow steering rules and packet processing logic to share contextual information such as flow identifiers, source context, or policy tags. It improves coordination between NIC and E-Switch pipelines, enabling more flexible traffic handling and advanced offload capabilities.
Parallel Suspends of VFs	Added support for parallel suspend operations across multiple VFs.
Enable/Disable ECN in Upstream	Added the ability to enable or disable ECN in the upstream by allowing the MODIFY_CONG_STATUS and QUERY_CONG_STATUS commands in mlx5_fwctl.
ADP-RETX Timeout Profile	Firmware now allows the ADP-RETX timeout profile to be configured even when there are open QPs.
RTT RTC Timestamp	Added support for using the real-time clock to fill the request and response timestamps in hardware-generated RTT packets. To enable this feature, set `REAL_TIME_CLOCK_ENABLE` in **mlxconfig** and configure `ROCE_CC_RTT_TIMESTAMP_FORMAT` to `0x02 (REAL_TIME)`. For additional details, see Known Issue 4496642 in the *Known Issues* section.
SPDM (Security Protocol and Data Model) Measurements	The SPDM (Security Protocol and Data Model) measurements reporting mechanism has been updated to comply with version 1.2.0 of the SPDM specification. For further information refer to https://docs.nvidia.com/networking/display/dpunicattestation/connectx-7+measurements
Warm Boot when UPT VMs are Active	Added support for warm boot when UPT VMs are active, allowing the system to reboot without requiring a full shutdown of running VMs.
Bug Fixes	See *Bug Fixes in this Firmware Version* section.

Feature/Change	Description
28.46.3048	
Security Hardening Enhancements	This release contains important reliability improvements and security hardening enhancements. NVIDIA recommends upgrading your devices firmware to this release to improve the devices' firmware security and reliability.

Feature/Change	Description
28.46.1006	
PCIe Congestion Events	Added support for the general PCIe congestion object to monitor and receive events related to inbound and outbound PCIe congestion. A threshold can be configured to specify when the firmware should send an event to the software. This capability is activated by setting the mlxconfig parameter `PCIE_CONGESTION_MONITOR`.

Feature/Change	Description
28.46.1006	
Reading the Board ID from the EEPROM	Enabled reading the board ID from the EEPROM on the pluggable board and adjusting the configuration accordingly. For a 2×QSFP112 board (`board_id=4`), the firmware replaces the default 1×OSFP configuration with support for 2 QSFP ports.
Safely Identify DPUs/SmartNICs is a Machine and PCIe Slot	A new access register is introduced that accepts a type, length, and R/W command. • **Write operation:** Allocates a new ICMC buffer of the specified size (aligned to 64B) and stores the provided data. If a buffer for the given type already exists, the data in the ICMC is overwritten, and the locked area is adjusted accordingly • **Read operation:** If a buffer exists, its data is copied out. If not, the access register returns a size of 0 or an explicit error The length can be stored within the data in the ICMC, and the type is mapped to 256B chunks (due to access register limitations), so the VA of the buffer is calculated as `(base + (type << 8))` . The first 4 bytes store a validity flag and the length. If length storage is unnecessary (e.g., null-terminated data), a hardware read can use a cache-line hit as a validity bit. This feature is designed for limited use cases and does not address multi-host scenarios or broader ICMC utilization implications.
RSS with Crypto Offload	Added support for RSS with crypto offload enabling the NIC to parallelize packet processing across CPU cores while performing encryption/decryption in hardware. Additionally, introduced a new l4_type_ext parameter with values: 0 (None), 1 (TCP), 2 (UDP), 3 (ICMP).
Incoming NC-SI Messages Validation for the payload_len Field	Added an extra validation for the payload_len field in incoming NC-SI messages. Previously, invalid packets might have been accepted; now, such packets are silently dropped.
Bug Fixes	See *Bug Fixes in this Firmware Version* section.

9.2 Bug Fixes History

⚠ This section includes history of 3 major releases back. For older releases history, please refer to the relevant firmware versions.

Internal Ref.	Issue
5085054 / 5103944	**Description:** Resolved an issue where resetting the ID list register released only the domain counters.
	Keywords: Counters
	Detected in version: 28.49.1014
	Fixed in Release: 28.50.1002
5083504 / NVbug 6078783	**Description:** Resolved an issue where firmware internal errors could occur due to FW_INTERNAL_USAGE partition data corruption. The firmware now recovers by erasing the corrupted partition.

Internal Ref.	Issue
	Keywords: Firmware internal errors
	Detected in version: 28.49.1014
	Fixed in Release: 28.50.1002
5177191	**Description:** Resolved an issue with PLDM T5 component reporting. ConnectX devices now expose NIC firmware, NVIDIA NVConfig, and OEM NVConfig as independently updatable components. Optional NVConfig components may report an empty or 0 version and are shown only with PLDM T5 versions above 1.0.0.
	Keywords: PLDM
	Detected in version: 28.49.1014
	Fixed in Release: 28.50.1002
4851684	**Description:** Resolved an issue where, under high-stress LRO traffic, an internal FIFO could enter a hardware deadlock state, preventing the NIC from receiving additional traffic. The fix detects and releases the deadlock if it occurs, restoring the NIC to a functional state.
	Keywords: LRO traffic
	Detected in version: 28.49.1014
	Fixed in Release: 28.50.1002
5174504 / 5140787	**Description:** Resolved an issue where intensive parallel QP INIT2RTR / DESTROY operations could incur high operation latency and reduce connection establishment rates when PCC was enabled.
	Keywords: PCC, INIT2RTR, DOCA PCC
	Detected in version: 28.49.1014
	Fixed in Release: 28.50.1002
4947006 / 4980956 / 4982511	**Description:** Resolved two rare race conditions in the PCC steering extension when the feature is enabled through path migration, empty RTT, or a custom header. Under rare timing conditions during QP creation or destruction, these issues could cause traffic disruption or resource leaks.
	Keywords: PCC steering extension
	Detected in version: 28.49.1014
	Fixed in Release: 28.50.1002

Internal Ref.	Issue
4948901	**Description:** Resolved an issue where the PLDM firmware-update flow used incorrect instance_id tracking for retries, which could allow repeated old chunk responses to be accepted as new data. The fix stores the actual transmitted request instance_id and uses it consistently during retries, preventing unexpected stale responses from being accepted.
	Keywords: PLDM firmware-update flow
	Detected in version: 28.46.3048
	Fixed in Release: 28.50.1002
5166648	**Description:** Resolved an issue involving an uninitialized stack read and an inverted EtherType check in the RX parser.
	Keywords: RX parser
	Detected in version: 28.47.1026
	Fixed in Release: 28.50.1002
4937640	**Description:** Resolved an issue where a PPCC mlxreg read operation could succeed when executed on a PF that is not the port owner, which could have security implications.
	Keywords: PCC, PPCC
	Detected in version: 28.49.1014
	Fixed in Release: 28.50.1002
4517149	**Description:** Improved FLR and suspend/resume handling when VQoS was never enabled. In this case, there is no need to wait for all three iterations, since the wait was originally added to allow the SQ to be flushed from the distribution list. If VQoS was never enabled, there is nothing to clean up.
	Keywords: FLR
	Detected in version: 28.46.1006
	Fixed in Release: 28.50.1002
5180465	**Description:** Resolved an issue where, after an unexpected test termination while the max-entry-count ICMD was active, basic_debug could incorrectly report PSA error -30 because the expected steering_entry_count_limit event left a non-zero diagnostic context.
	Keywords: max-entry-count ICMD
	Detected in version: 28.49.1014
	Fixed in Release: 28.50.1002

Internal Ref.	Issue
5154717 / 5152076 / 5154806 / NVbug 6422398	**Description:** Resolved an issue where, when a transceiver module held its I2C management bus line stuck (SDA or SCL), the firmware detected the stuck bus and reset the module. After the reset, the module remained in low-power mode and its datapath was not re-established, preventing the link from coming up. On a shared module, all associated ports could drop simultaneously.
	Keywords: Cables
	Detected in version: 28.46.3048
	Fixed in Release: 28.50.1002
4923806 / 4867111 / 4927875	**Description:** Resolved an issue that could cause RoCE communication failures between specific NIC pairs after repeated queue pair (QP) create/destroy cycles. In the affected cases, traffic could enter a bad state and fail with transport retry counter exceeded errors. This fix prevents the NIC from entering that condition.
	Keywords: RDMA; connection failure
	Detected in version: 28.46.3048
	Fixed in Release: 28.50.1002
5093695	**Description:** Resolved an issue where using mlxconfig to configure all modules with the 0xff module split value could reset the modules to the default configuration.
	Keywords: mlxconfig
	Detected in version: 28.48.1000
	Fixed in Release: 28.50.1002
5090639	**Description:** Resolved an issue in single-domain mode where an FLR on a GVMI did not clear the per-domain usage bits in `SP_core_diag_multi_domain->pcie_link_latency_max_read` and `SP_core_diag_multi_domain->pcie_link_latency_min_read`. As a result, when the next GVMI took ownership and attempted to configure these counters, it could receive `DIAG_DATA_LIST_WRITE_STATUS_NO_RESOURCES`.
	Keywords: PCIe Link Latency Arch counters
	Detected in version: 28.49.1014
	Fixed in Release: 28.50.1002
4704203 / 4704271 / 4986813 / NVbug 5621969	**Description:** Resulved a constant packet drop issue that caused DeepEP test case traffic to hang. The fix updates the STE search flow to run under a locking mechanism, preventing access to invalid STE entries that could result in packet drops.
	Keywords: DeepEP
	Detected in version: 28.46.1006

Internal Ref.	Issue
	Fixed in Release: 28.50.1002
5077326 / 4902171	**Description:** Resolved an issue where a slow module response to the NCSI GetModuleSerialData command could incorrectly trigger a dead IRISC watchdog assert. The firmware now handles this waiting state correctly, so slow module responses no longer cause a false watchdog hang indication.
	Keywords: NCSI
	Detected in version: 28.43.1014
	Fixed in Release: 28.50.1002
5018241	**Description:** Resolved an issue where firmware could raise FATAL_ERR_HW_INDICATED with ext_synd 0x0063 during boot due to a misaligned MACsec ASO ICM base address. The ASO core hardware alignment check was triggered during the FLR-cleanup ICM sweep that runs at boot under SR-IOV with DPU-style INIs. The assert occurred only under this specific configuration combination, where latent issues in the ASO ICM resource table and libfhi static configuration aligned.
	Keywords: FATAL_ERR_HW_INDICATED, FLR, SR-IOV
	Detected in version: 28.49.1014
	Fixed in Release: 28.50.1002
4890697	**Description:** Resolved an issue where setting the SRQ limit during traffic over multiple QPs on the same SRQ could lead to stuck slices and an RX hang. The SRQ limit update mechanism was changed to avoid canceling end-to-end credit requests from slices.
	Keywords: SRQ
	Detected in version: 28.48.1000
	Fixed in Release: 28.50.1002

Internal Ref.	Issue
4980585 / NVBug 6084453	**Description:** Fixed an issue where NSM Get-Port-Network-Addresses returned an invalid format on B200/B300 HMC. It now follows the documented non-compact format.
	Keywords: NSM Get-Port-Network-Addresses
	Detected in version: 28.48.1000
	Fixed in Release: 28.49.1014
4971034 / 4967948	**Description:** Fixed an issue that could prevent the adapter's PCIe link from re-establishing after the host resumed from a deep power-down state. This fix improves the reliability of suspend/resume cycles.
	Keywords: PCIe (Standby / L2-L3 link recovery)

Internal Ref.	Issue
	Detected in version: 28.48.1000
	Fixed in Release: 28.49.1014
4885134 / 4875169 / 4885137 / 4892844	**Description:** Fixed PCIe link training failures on GB200 by correcting the equalization sequence logic.
	Keywords: PCIe
	Detected in version: 28.48.1000
	Fixed in Release: 28.49.1014
4964566 / 4957757	**Description:** Fixed a DEAD IRISC assert that could occur during TLV NV_DATA flash access by suspending the watchdog while waiting for flash IPC (until timeout), preventing the assert on TLV access.
	Keywords: DEAD IRISC assert
	Detected in version: 28.48.1000
	Fixed in Release: 28.49.1014
4657767 / 4658776 / 4874764 / 4874765	**Description:** Fixed an issue where repeatedly writing NVCONFIG TLVs could cause excessive NV_DATA partition swaps during garbage collection. This rapid cycling could accelerate flash wear (end-of-life at 100,000 erases) and potentially render the device inoperable. Firmware now avoids unnecessary physical writes by returning OK when the requested configuration already exists in flash, and increases the maximum supported NV_DATA partition swaps from 100,000 to 200,000.
	Keywords: NVCONFIG TLVs
	Detected in version: 28.48.1000
	Fixed in Release: 28.49.1014
4871267 / 4871254	**Description:** Fixed an issue where ICM_RES_HW_DMFS_ENCAP_H_FW was allocated per GVMI, preventing some RTTs from using it.
	Keywords: GVMI, RTT
	Detected in version: 28.48.1000
	Fixed in Release: 28.49.1014
4774394 / 4890471 / 4890472 / 4890473	**Description:** Fixed an issue where vDPA doorbell resources were not released, which could cause failures when running other functionality after a vDPA FLR. Doorbell resources are now properly unlocked.
	Keywords: vDPA
	Detected in version: 28.48.1000

Internal Ref.	Issue
	Fixed in Release: 28.49.1014
4789601 / 4850200 / NVBug 5736447	**Description:** Fixed an issue where RDMA traffic could stall in large-scale deployments for certain source IP and UDP source-port combinations when DOCA PCC was active and no congestion-control algorithm was configured in algorithm slot 0.
	Keywords: RDMA, DOCA PCC, Congestion Control Algorithm
	Detected in version: 28.48.1000
	Fixed in Release: 28.49.1014
4796182	**Description:** Fixed an issue where the live migration target did not receive a port state change event on the resume VHCA command. The target now generates this event so software that depends on port state is notified of any changes.
	Keywords: Live migration
	Detected in version: 28.47.1026
	Fixed in Release: 28.49.1014
4873608 / 4921307	**Description:** Fixed an issue where a precopy image was processed during the stop-copy phase, causing prolonged downtime due to a software limitation. The handling was slow because the handler performed a linear search for data; this was improved by replacing it with a faster search approach enabled via compile-time preprocessing.
	Keywords: Live Migration Downtime
	Detected in version: 28.47.1026
	Fixed in Release: 28.49.1014
4683339 / 4780301 / 4895260	**Description:** Fixed an issue where QPs established before loading DOCA PCC could exhibit inconsistent algorithm-selected behavior between ports in LAG mode after DOCA PCC is loaded.
	Keywords: Congestion Control, DOCA PCC
	Detected in version: 28.47.1026
	Fixed in Release: 28.49.1014
4867969 / 4868140	**Description:** Fixed an issue where, on ConnectX-7 Multi-ASIC systems, initializing the maximum number of VFs concurrently with large MSI-X allocations could hit ICMC resource limits; note that the 320 KB allocation remains mandatory on affected devices.
	Keywords: ICMC memory allocation
	Detected in version: 28.47.1026
	Fixed in Release: 28.49.1014

Internal Ref.	Issue
4578581 / 4626296	**Description:** Fixed an interoperability issue where, when ConnectX-7 communicates with ConnectX-8 using the probe-based algorithm, bandwidth could become extremely low due to probe packets being dropped.
	Keywords: Interoperability, Congestion Control, RTT
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000
4786813	**Description:** Fixed an issue where the DPA kernel used unsafe ICM access during process creation/modification, which could cause the DPA kernel to hang during FLR.
	Keywords: DPA kernel, FLR
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000
4804664 / 4806969	**Description:** Fixed an issue in the User Debugger “query caps” where it returned only the number of capabilities, not the capability bitmap.
	Keywords: User Debugger “query caps”
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000
4859700 / NVbug 5828711	**Description:** Fixed an issue caused by a race condition in standby/boot power sequencing. In certain timing windows, port power-down could be delayed such that the power-up flow detected the port still transitioning to power-down, causing the sequence to fail and leaving the port stuck in a powered-down state.
	Keywords: PXE boot
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000
4484662	**Description:** Fixed an issue where mlxlink reported 0 values for SNR (media and host) due to incorrect local port mapping in firmware and an incorrect page number used by MFT.
	Keywords: mlxlink
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000
4744039	**Description:** Fixed an issue where, due to an SMBus release race condition, the I^2C bus could become stuck.
	Keywords: SMBus, I^2C bus
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000
4773490 / 4823336	**Description:** Fixed an issue where fuse values were not aligned with the updated values burned across different ConnectX-7 setups.
	Keywords: Fuse values
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000

Internal Ref.	Issue
4532684 / 4635872 / 4794865 / 4794866 / 4794867 / NVbug 5385446	**Description:** Fixed an issue by improving the ADP-RETX algorithm to avoid re-arming without performing a retransmission.
	Keywords: ADP-RETX algorithm
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000
4727303 / 4718947	**Description:** Fixed an issue in the steering definers used for LAG with IPv6 traffic.
	Keywords: LAG, IPv6 traffic, steering
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000
4663915	**Description:** Fixed an issue where a spurious CNP was sent in response to an out-of-sequence packet.
	Keywords: PCC, CNP, OOS, RP, NP
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000
4450570 / 4780432 / 4780433	**Description:** Fixed an issue where the root complex sent MCTP-over-PCI messages before a BDF was assigned, causing responses to be sent with BDF 0. The fix ensures that MCTP messages routed by ID are ignored until a valid BDF is assigned.
	Keywords: MCTP-over-PCI, BDF, MCTP messages
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000
4809134 / 4824635	**Description:** Fixed an issue where the steering tables were not updated after enabling partial Spectrum-X capabilities (BTH.AR) via LLPD.
	Keywords: Steering tables, LLDP
	Detected in version: 28.47.1026
	Fixed in Release: 28.48.1000
2169950	**Description:** When decapsulation on a packet occurs, the FCS indication is not calculated correctly.
	Keywords: FCS
	Discovered in Version: 28.42.1000
	Fixed in Release: 28.48.1000
3735988	**Description:** In IB system, RTT_response_sl feature does not work with Sniffer tools (e.g., Wireshark/Tcpdump/).
	Keywords: Health buffer, sniffer, RTT
	Discovered in Version: 28.40.1000
	Fixed in Release: 28.48.1000

Internal Ref.	Issue
4608544	**Description:** Fixed an issue where, in rare live migration scenarios, a delayed doorbell triggered a false timeout alarm.
	Keywords: Live migration, doorbell, timeout alarm
	Detected in version: 28.46.1006
	Fixed in Release: 28.47.1088
4648642	**Description:** Fixed a rare issue in which destroying PCC NP configuration objects could result in assert 0x8175 being logged in dmesg.
	Keywords: Assert 0x8175, PCC NP
	Detected in version: 28.47.1026
	Fixed in Release: 28.47.1088
4718947	**Description:** Fixed an issue in the steering definers used for LAG with IPv6 traffic.
	Keywords: LAG, IPv6 traffic, steering
	Detected in version: 28.47.1026
	Fixed in Release: 28.47.1088
4690503	**Description:** Fixed an issue where creating a DPA process that uses 128 MB of data caused the dynamic library to fail with syndrome 0xdc30ac. The BSS section of the DPA application is now limited to 64 MB.
	Keywords: DPA process, BSS
	Detected in version: 28.47.1026
	Fixed in Release: 28.47.1088
4683823	**Description:** Some diagnostic data counters share hardware resources and cannot be configured simultaneously since 64-bit counter formats (e.g., DIAG_DATA_PARAMS_CONTEXT.output_format set to FORMAT_0 or FORMAT_1) consume more hardware resources per counter.
	Keywords: DOCA Telemetry Diagnostics
	Detected in version: 28.47.1026
	Fixed in Release: 28.47.1088

Internal Ref.	Issue
4570205	**Description:** Fixed a firmware issue where the ZTR_RTTCC algorithm parameters AI and HAI did not support a sufficient range.
	Keywords: PCC, ZTR_RTTCC
	Detected in version: 28.46.1006
	Fixed in Release: 28.47.1026
4629077	**Description:** Fixed an issue where coalescing regular SX events with SX RTT events under ZTR_RTTCC could keep improper event fields, which could impact congestion control behavior.
	Keywords: PCC, ZTR_RTTCC
	Detected in version: 28.46.1006

Internal Ref.	Issue
	Fixed in Release: 28.47.1026
4683328	**Description:** Fixed an issue in the ZTR_RTTCC algorithm where probe-abortion handling could behave improperly under high-stress network conditions, ensuring proper congestion control and stable traffic performance.
	Keywords: PCC, ZTR_RTTCC
	Detected in version: 28.46.1006
	Fixed in Release: 28.47.1026
4501554	**Description:** Fixed an assertion failure that could occur with the E-Switch uplink in specific configurations where the e-switch was disabled and Path Migration was active or GVMIs were using SRQ loopback in SQs. The issue occurred because the firmware attempted to perform cleanup operations when the uplink configuration lacked sufficient capacity. Now, when the E-Switch is disabled and no actions are available in the uplink STE, the firmware connects to the uplink STE instead of copying it.
	Keywords: Path migration, steering
	Detected in version: 28.46.1006
	Fixed in Release: 28.47.1026
4506854	**Description:** Added Scaling Factor "read" field. To obtain correct values in mlxlink, MFT version 4.33.0 or later is required.
	Keywords: Scaling Factor, mlxlink, MFT
	Detected in version: 28.46.1006
	Fixed in Release: 28.47.1026
4540897	**Description:** Added a recovery mechanism for I²C failures. In case of an I²C communication failure, the system now automatically attempts to recover and reinitialize the I/O expander to maintain continuous operation.
	Keywords: I2C failures, recovery mechanism
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.47.1026
4560691	**Description:** Fixed an issue in the MCTP SMBus configuration to ensure proper initialization and reliable communication between firmware components using the SMBus transport.
	Keywords: MCTP SMBus configuration
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.47.1026
4529293	**Description:** Fixed an issue where, during failover or restart, the SM sending a PortInfo MAD to the HCA firmware triggered reinitialization of port buffers, momentarily halting ingress traffic and causing packet drops. The firmware now avoids reconfiguring port buffers when the new configuration matches the current one.
	Keywords: OpenSM
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.47.1026

Internal Ref.	Issue
4683346	**Description:** Fixed an issue where, under the ZTR_RTTCC algorithm, a flow that reached its minimum rate due to heavy congestion would not recover its rate once the congestion cleared.
	Keywords: PCC, ZTR_RTTCC
	Discovered in Version: 28.46.1006
	Fixed in Release: 28.47.1026
4213025	**Description:** Fixed an issue where destroying or modifying a DPA partition from a non-owner VHCA was incorrectly allowed, such actions are now properly disallowed.
	Keywords: VHCA
	Discovered in Version: 28.46.1006
	Fixed in Release: 28.47.1026
4133425	**Description:** Fixed an issue where PTP was not supported when the port speed was configured to 1G.
	Keywords: PTP
	Discovered in Version: 28.46.1006
	Fixed in Release: 28.47.1026

Internal Ref.	Issue
4603774	**Description:** Fixed an issue where the adapter card could drop NC-SI over MCTP commands when padding bytes were present after the NC-SI checksum.
	Keywords: NC-SI
	Discovered in Version: 28.46.1006
	Fixed in Release: 28.46.3048

Internal Ref.	Issue
4501157 / 4257750	**Description:** Fixed a critical issue with a live firmware patch.
	Keywords: Live firmware patch
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4516394	**Description:** Fixed an uncleared state caused performance degradation after migration when there were significant differences in resource allocation by ensuring the state is cleared beforehand.
	Keywords: Performance
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4286902	**Description:** Fixed a race condition in DPA process termination during the exception flow, where a failed process could be missed and not reported to the user.

Internal Ref.	Issue
	Keywords: DPA
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4420567	**Description:** Removed an unnecessary and partially incorrect firmware check that blocked valid action list permutations allowed by the PRM. Validation of these permutations remains the responsibility of the software.
	Keywords: Header actions
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4443601	**Description:** Fixed a firmware issue where PXE failed to boot when both LAG ports were up.
	Keywords: PXE, LAG
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4443601	**Description:** Fixed a firmware issue where PXE failed to boot when both LAG ports were up.
	Keywords: PXE, LAG
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4475307	**Description:** Fixed an issue where PCC DCQCN used incorrect parameter values when link speed was 400Gbps or higher.
	Keywords: PCC DCQCN, congestion control
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4480427	**Description:** Fixed incorrect calculation of start address and mode for the CQE buffer in DPA CQ, which could cause CQEs to be written to the wrong address when the buffer is not 4K-aligned and spans a second page boundary.
	Keywords: CQ, CQE Buffer, DPA
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4490103	**Description:** Fixed the restart timing for the OSFP connector at 400 kHz I2C frequency.
	Keywords: Restart timing, OSFP, I2C frequency
	Discovered in Version: 28.44.1036
	Fixed in Release: 28.46.1006
4416919	**Description:** Updated Diagnostic Counters interface to prevent the following counters from being cleared after read: `pcie_link_latency_total_read_packet` and `pcie_link_latency_total_read_ns`.
	Keywords: Diagnostic Counters interface
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006

Internal Ref.	Issue
4520774	**Description:** Fixed an issue preventing `adp_retx` profile in the ROCE_ACCL access register from being set when there are outstanding QPs on the PF or VF.
	Keywords: ROCE_ACCL access register, QPs, PF, VF
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4403143	**Description:** Fixed an issue where `CREATE_DPA_PROCESS` could fail if a `DESTROY_DPA_PROCESS` (still running during destroy) was executed on a different VHCA. Also addressed a possible failure of `CREATE_DPA_PROCESS` after FLR.
	Keywords: DPA_PROCESS, FLR
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4388371	**Description:** Fixed an issue where an uninitialized pport in the SLRG command, when using the SMP interface, caused an assertion failure.
	Keywords: SLRG, SMP interface, pport
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4531558	**Description:** Fixed inconsistent LED behavior where the LED color for max speed was yellow and green otherwise, contrary to specification, due to a swapped GPIO mapping between control and PHY LEDs in the INI file.
	Keywords: LED
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4470053	**Description:** Fixed an issue with vQoS parameter configuration to improve latency handling for large messages.
	Keywords: vQoS, latency
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4366117	**Description:** Configuring a small MTU leads to fragmentation of packets critical for the PXE boot process. As a result, the PXE boot filters mistakenly discard these packets, causing the PXE boot to fail.
	Keywords: PXE boot filters
	Detected in version: 28.45.1020
	Fixed in Release: 28.46.1006
4475307	**Description:** Fixed an issue where PCC DCQCN used incorrect parameter values when link speed was 400Gbps or higher.
	Keywords: PCC DCQCN, congestion control.
	Detected in version: 28.45.1020
	Fixed in Release: 28.46.1006

Internal Ref.	Issue
4486431	**Description:** Fixed an issue where issuing multiple parallel queries of DPA_THREAD objects with the same object ID could fail.
	Keywords: DPA
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006
4497103	**Description:** Fixed the setting of the adaptive retransmission profile.
	Keywords: Adaptive retransmission profile
	Discovered in Version: 28.45.1020
	Fixed in Release: 28.46.1006

10 Legal Notices and 3rd Party Licenses

The following are the drivers' software, tools and HCA firmware legal notices and 3rd party licenses.

Product	Version	Legal Notices and 3rd Party Licenses
Firmware	xx.51.10xx	• License • 3rd Party Notice • 3rd Party Unify Notice • HCA Firmware EULA
DOCA-Host	3.6.0	• License • 3rd Party Notice • 3rd Party Unify Notice
MFT FreeBSD	4.38.0-134	• License • 3rd Party Notice • 3rd Party Unify Notice
MFT Linux		• License • 3rd Party Notice • 3rd Party Unify Notice
MFT VMware		• License • 3rd Party Notice • 3rd Party Unify Notice
MFT Windows		• License • 3rd Party Notice • 3rd Party Unify Notice

Notice

This document is provided for information purposes only and shall not be regarded as a warranty of a certain functionality, condition, or quality of a product. Neither NVIDIA Corporation nor any of its direct or indirect subsidiaries and affiliates (collectively: “NVIDIA”) make any representations or warranties, expressed or implied, as to the accuracy or completeness of the information contained in this document and assumes no responsibility for any errors contained herein. NVIDIA shall have no liability for the consequences or use of such information or for any infringement of patents or other rights of third parties that may result from its use. This document is not a commitment to develop, release, or deliver any Material (defined below), code, or functionality.

NVIDIA reserves the right to make corrections, modifications, enhancements, improvements, and any other changes to this document, at any time without notice. Customer should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

NVIDIA products are sold subject to the NVIDIA standard terms and conditions of sale supplied at the time of order acknowledgement, unless otherwise agreed in an individual sales agreement signed by authorized representatives of NVIDIA and customer (“Terms of Sale”). NVIDIA hereby expressly objects to applying any customer general terms and conditions with regards to the purchase of the NVIDIA product referenced in this document. No contractual obligations are formed either directly or indirectly by this document.

NVIDIA products are not designed, authorized, or warranted to be suitable for use in medical, military, aircraft, space, or life support equipment, nor in applications where failure or malfunction of the NVIDIA product can reasonably be expected to result in personal injury, death, or property or environmental damage. NVIDIA accepts no liability for inclusion and/or use of NVIDIA products in such equipment or applications and therefore such inclusion and/or use is at customer’s own risk.

NVIDIA makes no representation or warranty that products based on this document will be suitable for any specified use. Testing of all parameters of each product is not necessarily performed by NVIDIA. It is customer’s sole responsibility to evaluate and determine the applicability of any information contained in this document, ensure the product is suitable and fit for the application planned by customer, and perform the necessary testing for the application in order to avoid a default of the application or the product. Weaknesses in customer’s product designs may affect the quality and reliability of the NVIDIA product and may result in additional or different conditions and/or requirements beyond those contained in this document. NVIDIA accepts no liability related to any default, damage, costs, or problem which may be based on or attributable to: (i) the use of the NVIDIA product in any manner that is contrary to this document or (ii) customer product designs.

No license, either expressed or implied, is granted under any NVIDIA patent right, copyright, or other NVIDIA intellectual property right under this document. Information published by NVIDIA regarding third-party products or services does not constitute a license from NVIDIA to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property rights of the third party, or a license from NVIDIA under the patents or other intellectual property rights of NVIDIA.

Reproduction of information in this document is permissible only if approved in advance by NVIDIA in writing, reproduced without alteration and in full compliance with all applicable export laws and regulations, and accompanied by all associated conditions, limitations, and notices.

THIS DOCUMENT AND ALL NVIDIA DESIGN SPECIFICATIONS, REFERENCE BOARDS, FILES, DRAWINGS, DIAGNOSTICS, LISTS, AND OTHER DOCUMENTS (TOGETHER AND SEPARATELY, “MATERIALS”) ARE BEING PROVIDED “AS IS.” NVIDIA MAKES NO WARRANTIES, EXPRESSED, IMPLIED, STATUTORY, OR OTHERWISE WITH RESPECT TO THE MATERIALS, AND EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES OF NONINFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE. TO THE EXTENT NOT PROHIBITED BY LAW, IN NO EVENT WILL NVIDIA BE LIABLE FOR ANY DAMAGES, INCLUDING WITHOUT LIMITATION ANY DIRECT, INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES, HOWEVER CAUSED AND REGARDLESS OF THE THEORY OF LIABILITY, ARISING OUT OF ANY USE OF THIS DOCUMENT, EVEN IF NVIDIA HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. Notwithstanding any damages that customer might incur for any reason whatsoever, NVIDIA’s aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the Terms of Sale for the product.
